Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

Claim 11; Page 10; 49pp; English.

The present sequence is that of a peptide comprising amino acid residues 181-402 of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SK23 ADD3549. The peptide binds to a major histocompatibility complex (WHC) class II protein. It was identified as a potential B cell epitope using a matrix-based algorithm for epitope prediction, which was used to search the primary amino acid sequence of GbpB for known MHC class II binding motifs. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These comprise MHC class II protein-binding GbpB peptides can be used in immunogenic enjas II protein-binding GbpB peptides covalently linked with peptide subunits (preferably from the catalytic domain) of a glucosyltransferse. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                               Gaps
prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

Claim 5; Page 8-9; 49pp; English.

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus muteans strain SSM3. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibilty complex (WHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multispitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                  immunogenicity, immune stimulation, glucan binding protein-B;
microparticle, major histocompatibility complex; tooth disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.

The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence-based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network software, training an artificial neural network MNN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins probability of basing an adhesin and coding adhesin and adhesin-like proteins, having 274 fully defined 162-concing adhesin and adhesin-like proteins, having 274 fully defined 162-concing adhesin and adhesin-like proteins, having 105 fully defined 306-15876 base pairs (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 306-15876 base pairs (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying and shesin and adhesin-like proteins for further testing in development of new vaccine formulations confining that are important in drug discovery and preventing therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating therapeutics for whooping cough, pneumonia, educating the educations (M1) is educated to the educated and uninary tract infections. (M1) is educated to the educated educated to the educated educated to the educated educated educated educated educated educated educated educated educated educated educated e
Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (M1) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    algorithm, adhesin, pharmaceutical, vaccine, drug screening, bordetella pertussis infection, antibacterial, pneumonia, antiinflammatory, respiratory-gen.; gastric ulcer; antiulcer; gastrointestinal-gen, urinary tract infection, antimicrobial; uropathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                             New composition comprising a fragment of a glucan binding protein-B (dpbB) that binds to MRC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ramachandran S;

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 3SN1. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 omposition useful as vaccines for dental caries comprises a fragment of glucan binding protein-B binding to a major histocompatibility complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5; Page 8; 49pp; English

Taubman MA;

o; composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein. The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 15JP2. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an artibody in a mammal. Dispitopic or multipeptopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in Glucan binding protein-B; GbpB; vaccine; anticaries; epitope; immunogen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MMC class II binding fragments of GbpB can be used in
                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

Streptococcus mutans. WO2005076010-A2.

Microbial pathogen adhesin protein sequence, SEQ ID NO:352.

```
New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                     ne stimulation; glucan binding protein-B; histocompatibility complex; tooth disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 108; DB 9; Length 432; 100.0%; Pred. The present invention relates to a computational method (M1) for identifying adhesin and adhesin-like proteins, by computing the sequence to based attributes of protein sequences using five attribute modules of a neural network software, training an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins having probability of being an adhesin and adhesin-like proteins, having 274 fully defined 162-cc encoding adhesin and adhesin-like proteins, having 274 fully defined 162-cc encoding adhesin and adhesin-like proteins, having 105 fully defined 306-15876 base pairs (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base pair (SEQ ID NO: 265-763); a set of 279 annotated adhesin-like proteins, having 279 fully defined 53-3716 base pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based on (M1). (M1) is useful for identifying adhesin and adhesin-like proteins, of therapeutic potential, and identifying adhesin and adhesin-like proteins for further testing in development of new vaccine formulations to eliminate diseases caused by various pathogenic organisms. (M1) is defined for identifying adhesin and adhesin-like proteins for further testing in development of new vaccine formulations to discontant and adhesin-like proteins for identifying adhesin and adhesin-like proteins for further testing in development of new vaccine formulations to discontant and adhesin-like proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the proteins for the protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 discovery and preventing therapeutics for whooping cough, pneumonia, gastric ulcer and urinary tract infections. (M1) identifies adhesins from distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (M1) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä

ine present interacts. Our computation which is the present interacts of a computing the sequence based attributes of protein sequences using five attribute modules of a central network foftware, training an artificial neural network (ANN) for each of the computed five attributes, and identifying the adhesin and adhesin-like proteins, having probability of being an adhesin and adhesin-like proteins, having 274 fully defined 162 encoding adhesin and adhesin-like proteins, having 105 fully defined 162 in 1151 base pair (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical adhesin and adhesin-like proteins, having 105 fully defined 306-15876 base pairs (SEQ ID NO: 659-763); a set of 279 annocated adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base and references; and a fully connected multilayer feed forward ANN (I) is useful for identifying adhesin and adhesin-like proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO: 280-384) sequences; and a fully connected multilayer feed forward ANN (I) based on (MI). (MI) is useful for identifying add shostn-like proteins for further testing in development of new vaccine formulations content and identifying and short-listing proteins for further testing in development of new vaccine formulations content and pathesine part in development of new vaccine formulations in the standard of the proteins for further testing in development of new vaccine formulations contents and adhesine pathogenic organisms. (MI) is successed to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to be added to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful for identifying putative adhesins that are important in drug discovery and preventing therapeutics for whooping cough, pneumonia, gastric ulcer and urinary tract infections. (MI) identifies adhesins from distantly related organisms, and from bacteria belonging to a wide phylogenetic spectrum. (MI) is capable of predicting adhesive nature of unique proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                  algorithm; adhesin; pharmaceutical; vaccine; drug screening; borderella pertussis infection; antibacterial; preumonia; antiinflammatory; respiratory-gen.; gastric ulcer; antiulcer; gastrointestinal-gen.; urinary tract infection; antimicrobial; uropathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a computational method (M1) for

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Title: The complete genome sequence of Escherichia coli K-12.
A;Title: The complex: A64720; MUID:97426617; PMID:9278503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Residues: 1-808 <br/>
A; Residues: 1-808 <br/>
A; Cross-references: UNIPARC: UPI00001680BD; GB: AE000254; GB: U00096; NID: g1787862; PIDN: AA<br/>
A; Cross-references: UNIPARC: UPI00001680BD; GB: AE000254; GB: U00096; NID: g1787862; PIDN: AA<br/>
A; Experimental source: strain K-12, substrain MG1655<br/>
C; Superfamily: trimethylamine-N-oxide reductase<br/>
C; Superfamily: trimethylamine-N-oxide reductase<br/>
C; Keywords: 4Fe-45; iron-sulfur protein; metalloprotein; molybdenum; oxidoreductase<br/>
E; 1-46, Domain: signal sequence #stratue predicted <br/>
A77-808/Product: dimethylaulfoxide reductase chain A2, anaerobic #stratus predicted <br/>
F; 60, 64, 68, 100/Binding site: iron-sulfur clusters (Cys) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 14

Patent No. 6800744
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID
TITLE OF INVENTION: TREAPEUTICS
THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence Sequence Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 5584, Application US/09134000C

Sequence 5584, Application US/09134000C

Patent No. 6617156

GENERAL INFORMATION:

TAPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: BNTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BNTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BNTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT PELING DATE: 1998-08-13

PRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: Patentin version 3.1

SEQ ID NO 5584

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1682, Application US/09710279
Patent No. 6703492
GENERAL INFORMATION:
APPLICANT: KIMMERLY, WILLIAM JOHN
TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS
Sequence 1, Application US/09144085
Patent No. 6280999
GENERAL INFORMATION:
APPLICANT: Gustafeson, Claes
APPLICANT: Betlach, Mary C.
APPLICANT: Ashley, Gary
APPLICANT: Julien, Brainer
TITLE OF INVENTION: TRAINER
TITLE OF INVENTION: TREEPOR
TITLE OF INVENTION: TREEPOR
TITLE OF INVENTION: TREEPOR
TITLE OF TREEPOR SORANGIUM POLYKETIDE SYNTHASES AND ENCODING DNA

Patent No. 6280999

GENERAL INFORMATION:

APPLICANT: Gustafsson, Claes

APPLICANT: Betlach, Mary C.

APPLICANT: Ashler, Bryan

APPLICANT: Jermann, Rainer

TITLE OF INVENTION: SORANGIUM POLYKETIDE SYNTHASES AND ENCODING DNA

TITLE OF INVENTION: SORANGIUM POLYKETIDE SYNTHASES AND ENCODING DNA

TITLE OF INVENTION: SORANGIUM POLYKETIDE SYNTHASES AND ENCODING DNA

TITLE OF INVENTION: MUMBER: US/09/144,085

CURRENT FILING DATE: 1998-08-31

EARLIER APPLICATION NUMBER: 09/010,809

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3

Sequence 352, Application US/11052554A
Publication No. US20050288866A1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: COMPUTATIONAL METHOD FOR IDENTIFYING ADHESIN AND ADHESIN-LIKE
TITLE OF INVENTION: PROTEINS OF THERAPEUTIC FOTENTIAL
TITLE OF INVENTION: PROTEINS OF THERAPEUTIC FOTENTIAL
TITLE OF INVENTION UNMER: US/11/052,554A
CURRENT APPLICATION NUMBER: US/01/052,554A
CURRENT FILING DATE: 2005-02-07
FRIOR APPLICATION NUMBER: US 60/589,227
FRIOR FILING DATE: 2004-07-20
FRIOR FILING DATE: 2004-07-20
